**balkan policies for green economic growth**

**sofia 11 june 2012**

# the energy community

- a high degree of complexity
- energy between sustainability, markets and securing supply
- the specifics of south east europe
- learning from the european union

- the energy community *acquis communautaire* on environment
  - binding directives
  - non-binding endeavours
  - the state of implementation
  - the 2011 study
  - the task force

- the large combustion plants directive in particular

- impact on human lives and environment
- impact on security of supply
- implementation costs

- combating climate change in particular

- renewable energies
- energy efficiency
- emissions trading – a possibility?

- the regional strategy – development scenarios and costs
- how regional cooperation may increase sustainability
  - institutional fora for discussions and exchanges
  - greater clout towards external players
  - efficiency gains: sulphur in fuels as an example
  - flexibility gains: renewable energy as an example

**thank you for your attention!**
